

Infinity Maps GmbH was founded in 2020, with Dr. Heiko Haller, Johannes Grenzemann and Robin Lutz driving the concept of a central knowledge platform with their experience as a psychologist, business information scientist and mathematician.

About the founders

Dr. Heiko Haller is co-founder and CPO of the Karlsruhe-based IT startup Infinity Maps. Heiko is convinced that the problems of our time can be better solved with tools for thought. That's why he developed the iMapping method, which Infinity Maps is based on, as part of his doctoral thesis at the FZI Research Center for Information Technology in Karlsruhe. Apart from his start-up life, Heiko works as a consultant and coach in the areas of design thinking and knowledge management. In this function he supports large companies in organizational development, accompanies teams of all sizes in the systematic development of innovations and helps knowledge workers to find the right tools and methods. With his degree in psychology, his PhD from an information technology institute and his many years of professional experience in business, he sees himself as a "bridge" between people, business and technology.

Johannes W. Grenzemann is co-founder and CEO of Infinity Maps GmbH. Before founding the startup, he worked for many years as an innovation and product manager at various companies. The graduate in business informatics has a passion for the development of innovative products and entrepreneurship.

Robin Lutz is co-founder and CTO of Infinity Maps. Lutz studied mathematics at the Karlsruhe Institute of Techink (KIT) and is also co-founder of his own software company specializing in the architecture of self-hosted cloud systems.
